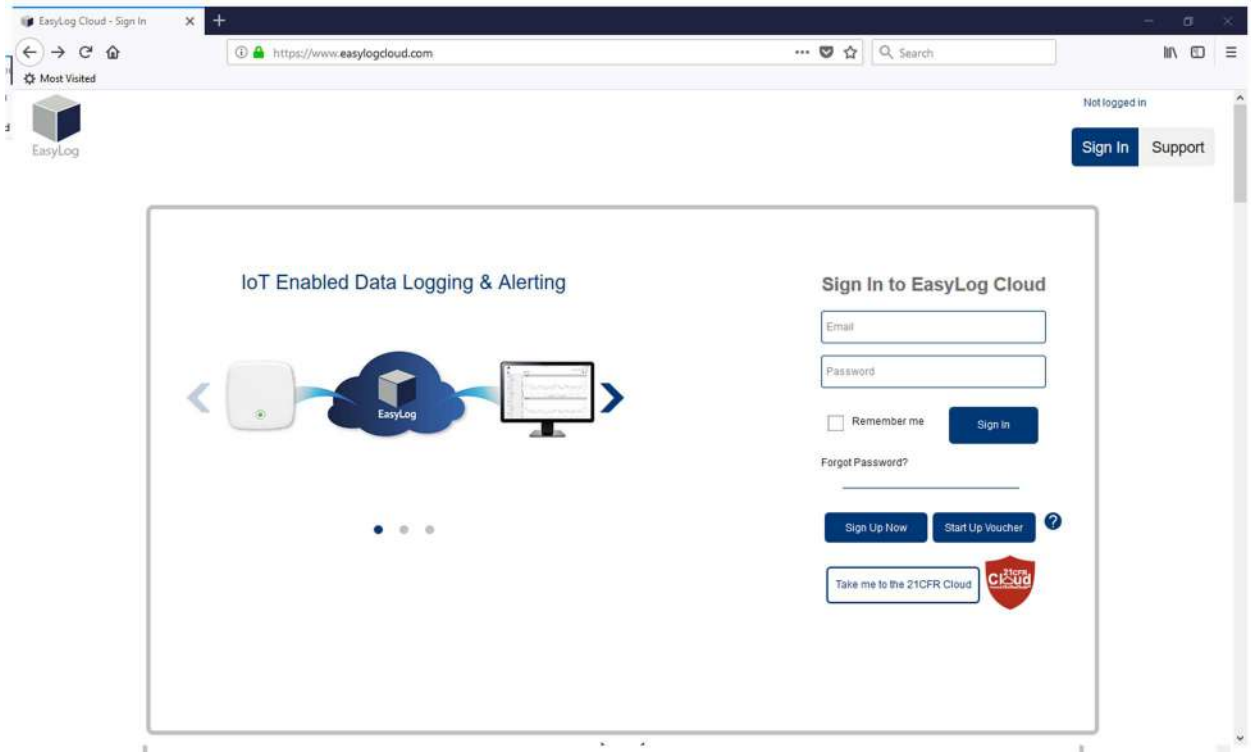
Digital WiFi Device

Setup Directions For an IPhone or Android Device

1. Charge the TempSure device.
    a. Using the included USB cable, plug the Digital Device into a charging plug or into a PC USB port (Step 6).
2. Open any browser to www.easylogcloud.com
3. Set up an account, (it's free) set one up by selecting the Sign Up Now button. If you already have an account, Sign In.



4. On an IPhone download the EasyLogCloud App from the App Store. On Android download the same App from whereever you get your Apps.
5. Open the App when download is complete.
6. Press >Setup Device

7. Select>WiFi Sensor
8. >Follow the instructions on the screen.
9. You will press the button on the bottom of the device.

10. Press the button and cycle through the screens until you see “SETUP-5”.
11. Press and hold the button for 5 seconds until “SETUP-A” is displayed.
12. Open the Settings menue on your mobile device.
13. Select ‘WiFi’ and choose the ‘EL-WiFi’ device from the list.
14. Return to the EasyLog Cloud App.
15. Follow the instructions on the App and enter the information you prefer for your temperature settions and device.
16. These instructions will guide you to connect your device to your WiFi and set up your device.
17. The App will look like the below screens when you complete the setup and connect to your device.
18. Remember;
    a. The faster you have your device connect to WiFi and the cloud to up load data, the faster the battery will be depleted and require re-charging.
    b. If you want a fast upload of temperature, you can keep the device connected to power via the USB cable all the time. This will not damage the unit.
